

INTRODUCING MSD Legend

LaBounty

SHEAR INTRODUCTION

STONE & POSITIONING

There is something to be said about having a skilled operator in the yard. These people know what, where, and how much to cut. They know when to back off, or power through, and they aren't making excuses. There is pride in keeping the machines they operate in top operational condition.

Unfortunately - this is not always your reality.

Skill & pride are variable, and often in short supply. Because of this we have chosen to focus on simplifying the time it takes to maintain a shear – regardless of who is in the cab.

With the latest version of our mobile scrap shear we rethought everything attached to the cutting jaws that requires routine maintenance and upkeep.

The goal – minimize time without compromising functionality.

The result – maximized productivity and uptime.

PROBLEM STATEMENT

Downtime for maintenance and repair can jeopardize productivity.

HOW WE WIN

INDEXABLE PROTECTION

The **Only** full-protection, indexable, piercing tip available.

The upper face is fully enclosed protecting it from wear and abuse, meaning less downtime for maintenance.

WEAR BAR PROTECTERS

A simplified alternative to weld build-up and hard-facing for maintaining wear surfaces

10% MORE FORCE

The new MSD has enhanced jaw geometry resulting in **10% more cutting force** at the apex compared to prior model.

STEADFAST CONTROL

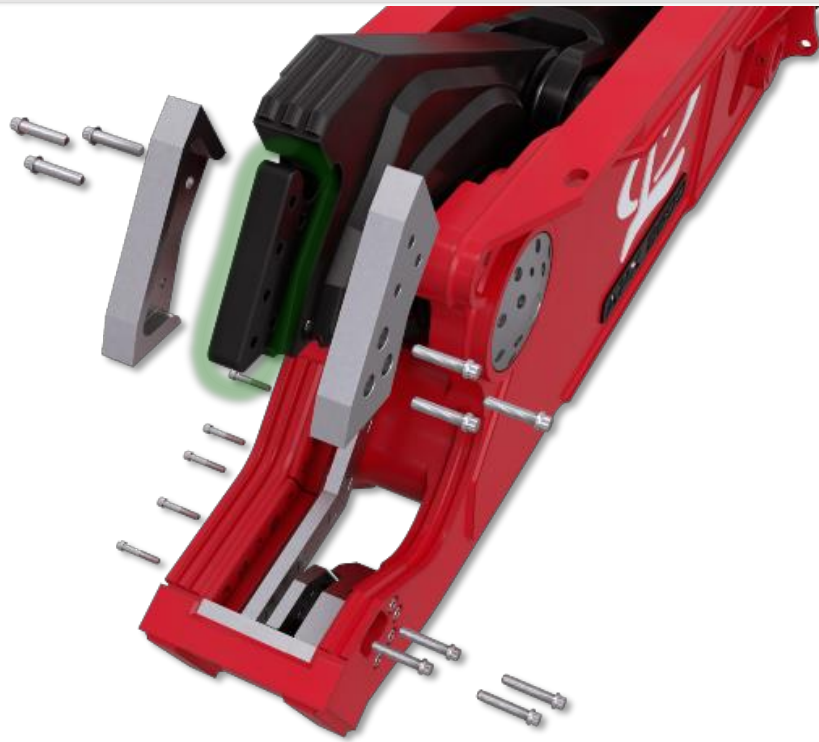

Full **360° rotation** with enhanced **balance** to help reduce attachment drift.

4-WAY INDEXABILITY

Long-lasting blades with **4-way** indexable cutting edges.
